	A	B	C	D	E	F	G	H
		Name	Model #	purpose	Quantity	Current/Non	notes	
		Camera Control Board + hardware		controls camera and mounts the control board	1	C		
		pi 4 USB-C connector chord			3	C		
		Pi Display		monitor for pi	1	C		
		HDMI to Ethernet cable		for pi 0's possibly	4	C		
		Wallops connectors and mounts set		connect to rocket power ****	1	C	stored in case	
		D-sub + standoffs			27	C	some sets some not	
		USB-C breakout			5	C		
		USB-A + cover			3	C	1 usba, 2 covers	
		Micro USB		power/ info	3	C		
		20 gage electrical wire spool		electrical running	9	C	may be 28 g? is this thick enough for our power?	
		12 V gear box motor 100 rpm		possible replacement?	1	C	needs testing- possible replacement bc higher rpm	
		Soldering Bread Boards		custom solder boards	9	C	various sizes	
		Distance sensor			2	C		
		thermal sensor		non-contact	3	C		
		motor couplers		for linear actuator	6	C		
		Heat sinks		for raspberry pi	10	C		
		HDMI f to mini HDMI m		hookup to pi 4's	1	C		
		Limit Switches		tell us when arm is extended and in home position	3	C	may go with better design- flimsy	
		on/off switch		control power/signal	1	C	may need for disabling during wallops testing	
		Breadboards		testing circuits	4	C		
		lead wires		testing circuits	N/A	C	plenty we have	
		pi zeros + kit		for pi cam (secondary)	3	C	stored with cams (2 kits and 1 wrapped)	
		cam ribbon connectors		for pi cam (secondary)	5	C	stored with cams	
		MCP		for pi cam (secondary) circuit	2	C	stored with pi cams	
		Accelerometers		measure acceleration	2	C	may be for extra data	
		Tememetry transceiver		send data to rocket	1	C	may not need?	
		Micro SD Adapter		for cam sav data extraction	4	C		
		Buck Converters		power regulation	8	C		
		pi 4 wall charger/ power			1	C		
		Madventure 360 cam set		Our main camera + accesories	3	C	2 spares all working	
		Large power supply		testing circuits/ system integration	1	C	belongs to space grant RR	
		High Torque Gear Motor, 12v, 10 rpm		backup motor for linear actuator	1	C	probably will not use but if we need higher torque will be good- but slower	

+ Electrical Mechanical Custom Parts Hardware

- Comprehensive Inventory
- Current Components
- Ordering
- Prototyping
- Connecting with local machinist

Mechanical: Updates & Improvements

- Design improvements on movement of camera arm
- Integrity of joints
- Mounting integrity
- Structural integrity enhancements
- Height requirement design corrections

- Spacing corrections and tolerances on Arm
- Hardware selection for joints and movement
- Position optimization for Ebox to power supply

Mechanical: Custom Parts & Updated Hardware

Scissor Arm Joints

- Flange bearings, bolt & nut combo for rigidity without loss of movement

Camera Side Arm Mount Joints

- Custom spacers
- Custom cotter pin for slide freedom
- Flange bearings added

left side

right side

Mechanical: Custom Parts & Updated Hardware

Base Mount bearing track

- More weight support
- Smoother, more controlled movement

- New bearing track concept has been tested

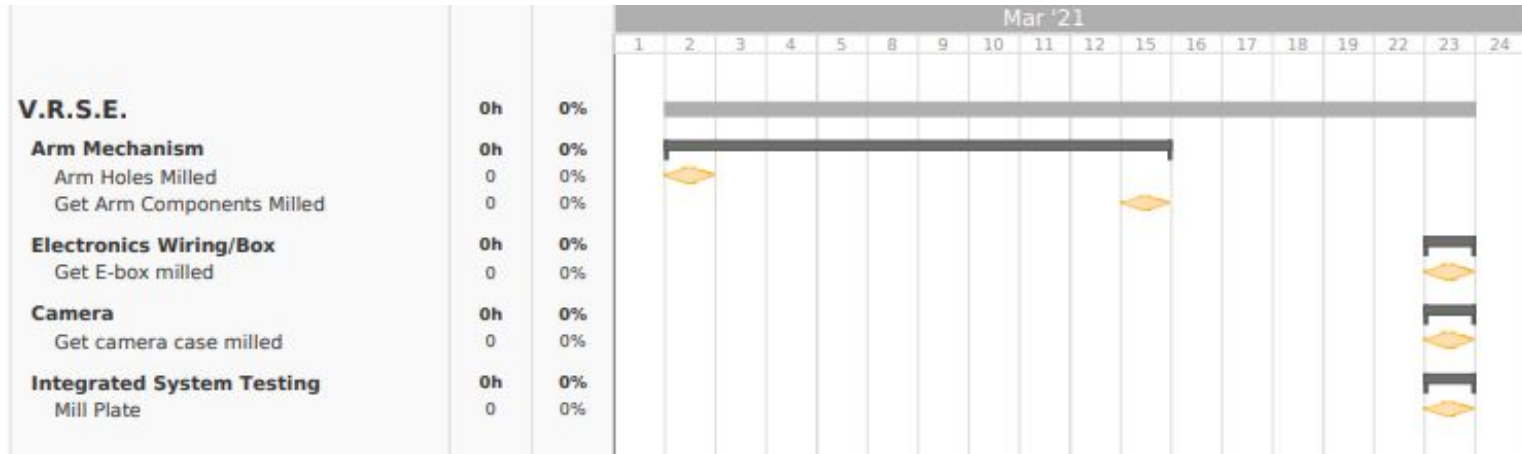

Motor Mount Joint

- Thicker walls
- Spacer integration with base mount
- Flange bearings added

- New mount has been fit-tested to motor

Mechanical:

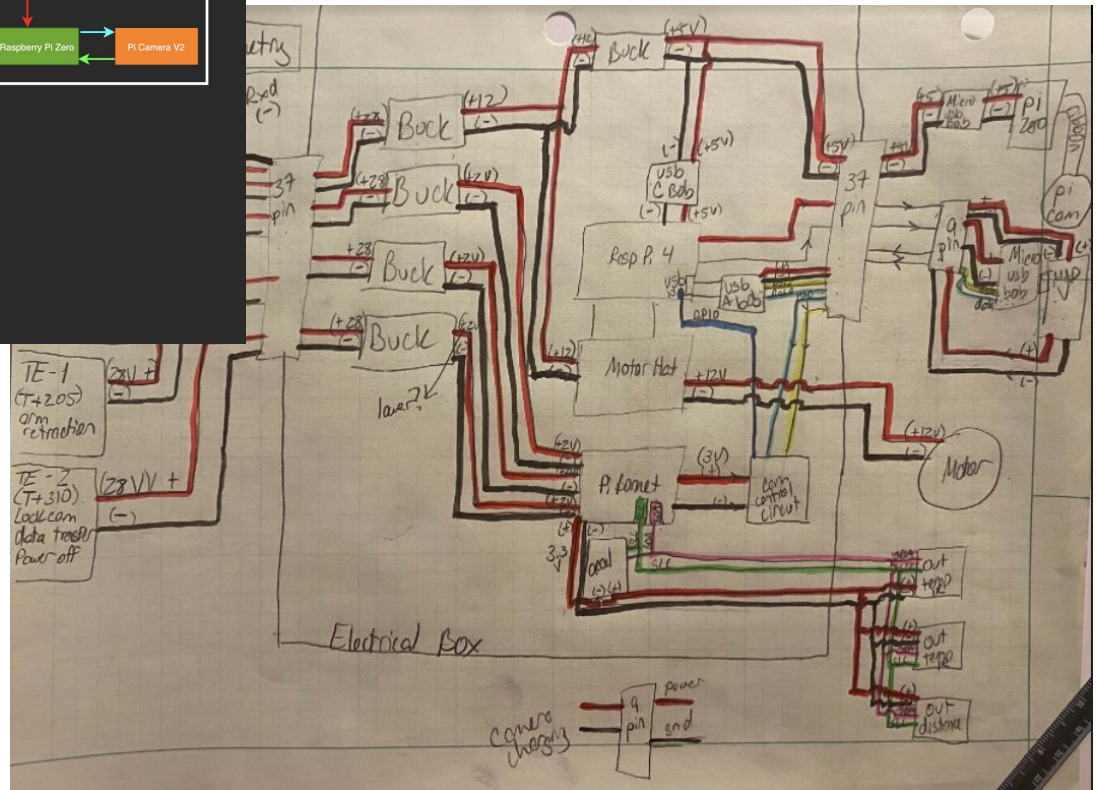

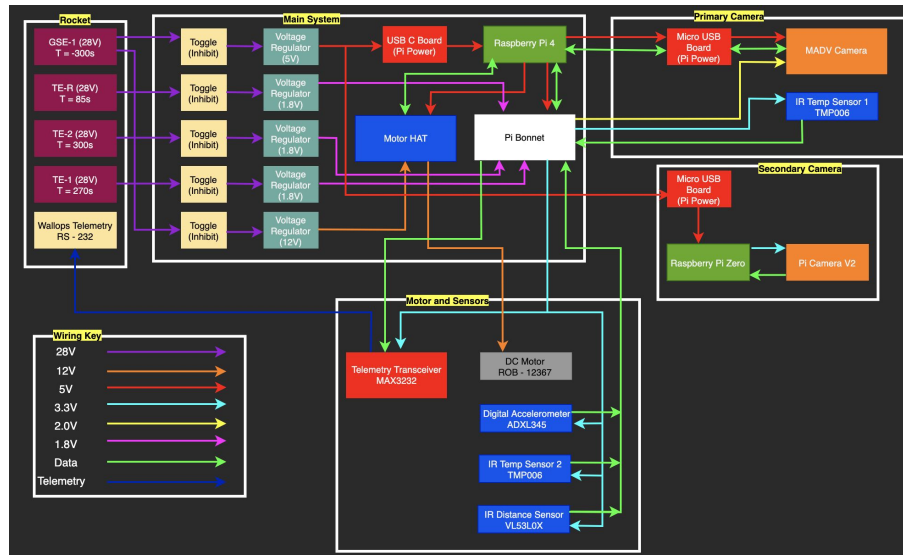

Machining in 3 Phases:

1. Holes in milled members
2. Scissor Arm System
3. Camera case/Electronics Box/Plate

Electrical Updates

47         if GPIO.input(button2)==0:
48             print ("Button 2 Pressed")
49             print ("Arm Retraction")
50             #kit.motor3.throttle = -1
51             if GPIO.input(limit_1)==1:
52                 kit.motor3.throttle = -1
```

Schedule

Stacie Barbarick

Schedule:

User Guide Compliance

<i>Requirement</i>	<i>Status/Reason (if needed)</i>
Center of gravity in 1" plane of plate?	Yes with 1b ballast
Weight 30.0+/- 1.0 (15.0 +/- 0.5) lbs?	lbs
Max Height < 10.75" (5.13")	5.10"
Bottom of deck has flush mount hardware?	It Will
Within Keep-Out Zone	Yes
Using < 10 A/D Lines	Yes
Using/Understand Parallel Line	N/A
Using/Understand Asynchronous Line	N/A
Using X GSE Line(s)	Yes, GSE-1
Using X Non-Redundant PWR Lines (TE-1, TE-2, TE-3)	Yes, TE-1, TE-2
Using X Redundant Power Lines (TE-R)	Yes, TE-R
Using < 1 Ah	Yes
Using <= 28 V	Yes
Using RF (If yes, list frequency and TX Power)	N/A
Using deployable?	Yes, speed is under 1 inch/sec
Whole team consists of US Persons	Yes
Using ITAR and/or Export Controlled hardware	N/A

Concerns:

1. Wire maintenance on the scissor arm
2. Redundancy if there's a power outage/ Raspberry Pi reboot time
3. Amount of time for hardware to come in and test
4. Circuit protection from ships power

Helpful:

Aluminum Prototyping : confirm CAD sooner, actual testing with correct materials etc. Save up to 3 weeks of time.

Bri and Graham as advisors if and when we hit snags

Questions:

Would we be able to use CU-Boulder's machine shop?

Could Chris discuss the need for limit switches with us?
